

REVEGETATION LIST for Birdscaping Canberra: bringing back birds, butterflies & bees.

The following plants are locally occurring native plants. They've been chosen to provide habitat for both small birds and insects. We will plant tubestock (small plants that have a good chance of success). The best places to source these sort of plants are from specialist native growers and nurseries. The Australian Native Plant Society hold regular plant sales. <http://anps-canberra.asn.au/site/index.php/community/plant-sales>

Trees (up to 10m) (50)
